

Отчет по дз 1 ETL процессы. Петров Александр.

Создание и заполнение таблиц-источников в базе данных с помощью DBeaver:

Для json:

```
CREATE TABLE IF NOT EXISTS json_storage (  
    id SERIAL PRIMARY KEY,  
    json_data JSONB  
);  
  
insert INTO json_storage (json_data)  
values  
(  
    '{  
      "pets": [  
        {  
          "name" : "Purrscloud",  
          "species" : "Cat",  
          "favFoods" : ["wet food", "dry food", "<strong>any</strong> food"],  
          "birthYear" : 2016,  
          "photo" : "https://learnwebcode.github.io/json-example/images/cat-2.jpg"  
        },  
        {  
          "name" : "Barksalot",  
          "species" : "Dog",  
          "birthYear" : 2008,  
          "photo" : "https://learnwebcode.github.io/json-example/images/dog-1.jpg"  
        },  
        {  
          "name" : "Meowsalot",  
          "species" : "Cat",  
          "favFoods" : ["tuna", "catnip", "celery"],  
          "birthYear" : 2012,  
          "photo" : "https://learnwebcode.github.io/json-example/images/cat-1.jpg"  
        }  
      ]  
    }'  
)
```

Для XML (целиком не уместилось, но там просто полный xml)

```

-- CREATE TABLE IF NOT EXISTS xml_storage (
    id SERIAL PRIMARY KEY,
    xml_data XML NOT NULL
);

-- INSERT INTO xml_storage (xml_data)
VALUES ('<?xml version="1.0"?>
<nutrition>
<daily-values>
  <total-fat units="g">65</total-fat>
  <saturated-fat units="g">20</saturated-fat>
  <cholesterol units="mg">300</cholesterol>
  <sodium units="mg">2400</sodium>
  <carb units="g">300</carb>
  <fiber units="g">25</fiber>
  <protein units="g">50</protein>
</daily-values>
<food>
  <name>Avocado Dip</name>
  <mfr>Sunnydale</mfr>
  <serving units="g">29</serving>
  <calories total="110" fat="100"/>
  <total-fat>11</total-fat>
  <saturated-fat>3</saturated-fat>
  <cholesterol>5</cholesterol>
  <sodium>210</sodium>

```
